Plastic...fantastic?

Why is plastic
such a
problem?

<https://www.youtube.com/watch?v=YFZS3Vh4fl>

What can we do?

A new idea from the Gardening Team.

An **ecobrick** is a plastic bottle stuffed solid with non-biological waste to create a reusable building block. Eco-bricks are used to make modular furniture, garden spaces and full-scale buildings such as schools and houses.

We want you to create eco bricks at home- stuffing plastic bottles with wrappers and other single use plastics. **You should then bring them in and leave them in R90 in exchange for P4Ts!**

(We will turn them into raised beds for plants)
